

Deer Valley Unified School District Science Curriculum

Biology

CONTENT STANDARDS: The following performance objectives from S1 C3 PO5, S2 C1 PO1-4, S2 C2 PO1-4, S3 C2 PO2-3 must be taught by end of academic year but are intended to be embedded throughout the academic year, therefore, have not been designated to be introduced in any particular semester. The intent of assigning the other Strand 1 and 3 performance objectives to a semester is based on science content; however, this does not mean the selected performance objectives relate only to that semester.

READING FOR SCIENCE AND TECHNICAL SUBJECTS STANDARDS, GRADES 9-10 (RST.9-10): The following RST.9-10.2, 4, 5 and 10 must be taught by end of academic year but are intended to be embedded throughout the academic year, therefore, have not been designated to be introduced in any particular semester. The intent of assigning the other RSTs to a semester is based on science content; however, this does not mean the selected standards relate only to that semester.

WRITING FOR SCIENCE AND TECHNICAL SUBJECTS STANDARDS, GRADES 9-10 (WST.9-10): The following WST.9-10.4, 5, 6 and 10 must be taught by end of academic year but are intended to be embedded throughout the academic year, therefore, have not been designated to be introduced in any particular semester. The intent of assigning the other WSTs to a semester is based on science content; however, this does not mean the selected standards relate only to that semester.

*RST.9-10.10 and WST.9-10.10 should be addressed when creating a cumulative performance assessment with each unit, end of semester and/or academic year.

Resources

Supporting resources linked to suggested instructional strategies/student activities/lessons can be found on <http://dvusdbiology.wikispaces.com/> within appropriate content area.

1st Semester

CHANGE OVER TIME			Semester: 1
Content: Cells			
Topic: Scientific Process			
Essential Question(s): 1. How do you solve problems? 2. How do scientists carry out valid investigations? 3. How does the scientific process apply to real-world scenarios?			
Content Objective(s)	Standards	ELA Standards	
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*
<p>Students will be able to:</p> <ul style="list-style-type: none"> - Construct and conduct a valid experiment from observation to conclusion. - Create and publish findings in lab report format. - Self-reflect on own lab reports and peer review other student reports for content and validity. - Read, evaluate and critic scientific publications. 	<p>S1, C1,</p> <ul style="list-style-type: none"> - PO 1. Evaluate scientific information for relevance to a given problem. - PO 2. Develop questions from observations that transition into testable hypotheses. - PO 3. Formulate a testable hypothesis. - PO 4. Predict the outcome of an investigation based on prior evidence, probability, and/or modeling (not guessing or inferring). <p>S1, C2,</p> <ul style="list-style-type: none"> - PO 1. Demonstrate safe and ethical procedures (e.g., use and care of technology, materials, organisms) and behavior in all science inquiry. - PO 2. Identify the resources needed to conduct an investigation. - PO 3. Design an appropriate protocol (written plan of action) for testing a hypothesis: <ul style="list-style-type: none"> o Identify dependent and independent variables in a controlled investigation. o Determine an appropriate method for data collection (e.g., using balances, thermometers, microscopes, spectrophotometer, using qualitative changes). o Determine an appropriate method for recording data (e.g., notes, sketches, photographs, videos, journals (logs), charts, computers/calculators). - PO 4. Conduct a scientific investigation that is based on a research design. - PO 5. Record observations, notes, sketches, questions, and ideas using tools such as journals, charts, graphs, and computers. <p>S1, C3,</p> <ul style="list-style-type: none"> - PO 1. Interpret data that show a variety of possible relationships between variables, including: <ul style="list-style-type: none"> o positive relationship o negative relationship 	<p>2 - Read sample abstracts, allowing students to draw conclusions and formulate a summary.</p> <p>3 - Follow a set of scientific procedures to conduct an investigation.</p> <p>4 – Provide sample tables/graphs and scientific articles/journals and have students determine meaning.</p> <p>6 – Provide sample labs and have students evaluate and critique lab as a whole or parts of, in terms of validity and accuracy.</p> <p>7 – Provide sample scenario based quantitative data and have students create data tables and/or graphs.</p>	<p>1 – Have students write a summary based upon opposing scientific evidence/claims and discuss/debate their opinion including evidence to support their point of view.</p> <ul style="list-style-type: none"> - Have students write an experimental summary based upon original or provided findings. <p>2- Write a formal lab report or parts of based upon personal findings or sample data using proper scientific style.</p>

	<ul style="list-style-type: none"> ○ no relationship - PO 2. Evaluate whether investigational data support or do not support the proposed hypothesis. - PO 3. Critique reports of scientific studies (e.g., published papers, student reports) - PO 4. Evaluate the design of an investigation to identify possible sources of procedural error, including: <ul style="list-style-type: none"> ○ sample size ○ trials ○ controls ○ analyses - PO 6. Use descriptive statistics to analyze data, including: <ul style="list-style-type: none"> ○ mean ○ frequency ○ range - PO 7. Propose further investigations based on the findings of a conducted investigation. <p>S1,C4,</p> <ul style="list-style-type: none"> - PO 1. For a specific investigation, choose an appropriate method for communicating the results. - PO 2. Produce graphs that communicate data. - PO 3. Communicate results clearly and logically. - PO 4. Support conclusions with logical scientific arguments. 	<p>- Have students analyze and discuss results based upon sample graphs and tables.</p>	
Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:			
Control	Negative/positive relationship	Trials	Qualitative
Variables (DV, IV)	Evidence	Sample size	Evaluate
Constant	Analysis	Theory	Critique
Experimental Group	Mean/mode/median	Law	Scientific writing
Hypothesis	Conclusion	Validity	Pure/applied science
	Bias	Quantitative	

*Number indicates which RST.9-10 standard is addressed.

CHANGE OVER TIME			Semester: 1
Content: Cells			
Topic: Chemistry			
Essential Question(s): 1. Why is Chemistry important to Biology? 2. Why are organic and inorganic molecules important to the cell?			
Content Objective(s)	Standards	ELA Standards	
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*
<p>Students will be able to:</p> <ul style="list-style-type: none"> - Identify the roles organic and inorganic chemicals (e.g., carbohydrates, proteins, lipids, nucleic acids, water, ATP) play in cells. - Explain the function of macromolecules, ATP and water to cell processes. - Describe the levels of organization of living things from cells, tissues, organs, organ systems, organisms, populations, communities, to ecosystems. 	<p>S4, C5,</p> <ul style="list-style-type: none"> - PO 2. Describe the role of organic and inorganic chemicals (e.g., carbohydrates, proteins, lipids, nucleic acids, water, ATP) important to living things. - PO 5. Describe the levels of organization of living things from cells, through tissues, organs, organ systems, organisms, populations, and communities to ecosystems. 	<p>4 – Interpreting periodic table symbols and chemical formulas</p>	
Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:			
Atomic structure/element/compound	Macro/micro molecules	Enzymes/catalysts	
Monomer/polymer	Types of bonds	pH	
Organic/inorganic	Proteins/lipids/nucleic acids/carbohydrates	Dehydration synthesis	

*Number indicates which RST.9-10 standard is addressed.

CHANGE OVER TIME		Semester: 1																	
Content: Cells																			
Topic: Structures																			
Essential Question(s): 1. What is life? 2. How do we know cells exist? 2. How do cell organelles interact to maintain life?																			
Content Objective(s)	Standards	ELA Standards																	
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*																
<p>Students will be able to:</p> <ul style="list-style-type: none"> - Distinguish living and non-living based upon characteristics of life - The students will compare the form and function of prokaryotic and eukaryotic cells - Compare and contrast cellular components 	<p>S4, C1, - PO 2. Compare the form and function of prokaryotic and eukaryotic cells and their cellular components.</p>	<p>8 & 9 – Ask students “Are viruses living or non-living?” and allow students time for independent investigation 9 – Give students different types of cells (bacterial, blood, nerve, tissue, stem, root, etc) and have students research form and function of their specific cell.</p>	<p>1, 7 & 8– Take side on the virus debate, have students create a formal/informal product to support their claim (debate, paper, presentation) 2a & 7 – Have students present findings of cell research project, being sure to properly cite/reference resources.</p>																
<p>Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:</p> <table border="0"> <tr> <td>Nucleus (nucleolus/nuclear pores/DNA)</td> <td>Cell wall</td> <td>Centromere</td> <td>Vesicles</td> </tr> <tr> <td>Prokaryotic/eukaryotic cell</td> <td>Golgi body/apparatus</td> <td>Centrioles</td> <td>Cytoplasm (cytosol/cytoskeleton)</td> </tr> <tr> <td>Cell membrane</td> <td>ER (smooth/rough)</td> <td>Mitochondria</td> <td>Vacuoles</td> </tr> <tr> <td>Ribosome</td> <td>Lysosomes</td> <td>Chloroplast</td> <td>Plant/animal cell</td> </tr> </table>				Nucleus (nucleolus/nuclear pores/DNA)	Cell wall	Centromere	Vesicles	Prokaryotic/eukaryotic cell	Golgi body/apparatus	Centrioles	Cytoplasm (cytosol/cytoskeleton)	Cell membrane	ER (smooth/rough)	Mitochondria	Vacuoles	Ribosome	Lysosomes	Chloroplast	Plant/animal cell
Nucleus (nucleolus/nuclear pores/DNA)	Cell wall	Centromere	Vesicles																
Prokaryotic/eukaryotic cell	Golgi body/apparatus	Centrioles	Cytoplasm (cytosol/cytoskeleton)																
Cell membrane	ER (smooth/rough)	Mitochondria	Vacuoles																
Ribosome	Lysosomes	Chloroplast	Plant/animal cell																

*Number indicates which RST.9-10 standard is addressed.

CHANGE OVER TIME			Semester: 1
Content: Cells			
Topic: Transport			
Essential Question(s): 1. Why do materials move in and out of cell? 2. How does cell transport help maintain homeostasis?			
Content Objective(s)	Standards	ELA Standards	
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*
Students will be able to: - Explain how cells transport materials across its membrane. - Explain the importance of water to cells. - Explain how energy is used in cellular growth development and repair.	S4, C1, - PO 4. Analyze mechanisms of transport of materials (e.g., water, ions, macromolecules) into and out of cells: o passive transport o active transport - PO 3. Explain the importance of water to cells. - PO 1. Describe the role of energy in cellular growth, development, and repair.	2 – Have student read a real-world text relating to heat stroke/dehydration (ex: Can You Stand the Heat?) and discuss cause and effect.	1 – Dialysis tubing and/or Egg-mosis lab report
Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:			
Hypo/hyper/isotonic (osmotic)	Osmotic pressure	Phospholipid bi-layer/ fluid mosaic	Pino/Phagocytosis
Concentration gradient	Turgor pressure	Semi-permeable	Diffusion (types of)
Active/passive transport	Hydrophilic/hydrophobic	Endo/exocytosis	Channel proteins
Crenate/cytolysis	Cohesion/adhesion		

*Number indicates which RST.9-10 standard is addressed.

CHANGE OVER TIME		Semester: 1	
Content: Cells			
Topic: Energetics			
Essential Question(s): 1. How do cells acquire energy? 2. Why is the relationship between plant and animal essential to life?			
Content Objective(s)	Standards	ELA Standards	
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*
<p>Students will be able to:</p> <ul style="list-style-type: none"> - Compare the processes of photosynthesis and cellular respiration in terms of energy flow, reactants, and products. - Explain how energy is used in cellular growth development and repair. 	<p>S4, C5, - PO 1. Compare the processes of photosynthesis and cellular respiration in terms of energy flow, reactants, and products.</p> <p>S4, C1, - PO 1. Describe the role of energy in cellular growth, development, and repair.</p>	<p>4 – Compare and contrast products and reactants of both cellular respiration and photosynthesis.</p>	<p>2 & 6 – Have students create a product (pamphlet, presentation, video) that persuades the audience to “buy stock” in plants and/or animals based upon the importance to energy flow in the biosphere.</p>
Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:			
Reactants/products/catalysts	Fermentation	Glycolysis	Citric acid cycle
Aerobic/anaerobic respiration	ADP/ATP/AMP	Mitochondria (cristae/matrix)	Calvin cycle
Cellular respiration	Energy	Chloroplast	Light-dependent/independent
Photosynthesis	ETC	(granum/thylakoids/stroma/stroma)	Photosystem I & II
		Electron carriers	

*Number indicates which RST.9-10 standard is addressed.

CHANGE OVER TIME		Semester: 1																
Content: Cells																		
Topic: Cellular Division (Mitosis and Meiosis)																		
Essential Question(s): 1. How are cell division and reproduction related? 2. Why is it necessary that the cell cycle be regulated?																		
Content Objective(s)	Standards	ELA Standards																
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*															
<p>Students will be able to:</p> <ul style="list-style-type: none"> - Explain why and how cellular reproduction occurs - Explain how energy is used in cellular growth development and repair. - Explain the process of meiosis. - Explain how meiosis and fertilization can give rise to genetic variation. 	<p>S4, C1, - PO 5. Describe the purposes and processes of cellular reproduction.</p> <p>S4, C1, - PO 1. Describe the role of energy in cellular growth, development, and repair.</p> <p>S4, C2, - PO4 Describe how meiosis and fertilization maintain genetic variation.</p>	<p>2 & 4 – Have students evaluate student selected or teacher provided articles regarding current cell cycle regulation (cancer), research and technologies.</p>	<p>2 & 7 – Conduct a study/research regarding:</p> <ul style="list-style-type: none"> a) Irregular cell growth b) Checkpoints within cell cycle c) And/or current practices to fight cancer 															
<p>Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 33%;">Interphase (G₁, G₂, G₀, S, M)</td> <td style="width: 33%;">Daughter cells</td> <td style="width: 33%;">Haploid/diploid</td> </tr> <tr> <td>Checkpoints</td> <td>DNA replication (chromosomes, chromatin, chromatid, histones)</td> <td>Mutations</td> </tr> <tr> <td>PMAT+C (mitosis/meiosis)</td> <td>Cell pole/equator</td> <td>Somatic/germ cells</td> </tr> <tr> <td>Interkinesis</td> <td>DNA helicase/polymerase/ligase</td> <td>Crossing over</td> </tr> <tr> <td>Spindle fibers</td> <td></td> <td>Tetrads</td> </tr> </table>				Interphase (G ₁ , G ₂ , G ₀ , S, M)	Daughter cells	Haploid/diploid	Checkpoints	DNA replication (chromosomes, chromatin, chromatid, histones)	Mutations	PMAT+C (mitosis/meiosis)	Cell pole/equator	Somatic/germ cells	Interkinesis	DNA helicase/polymerase/ligase	Crossing over	Spindle fibers		Tetrads
Interphase (G ₁ , G ₂ , G ₀ , S, M)	Daughter cells	Haploid/diploid																
Checkpoints	DNA replication (chromosomes, chromatin, chromatid, histones)	Mutations																
PMAT+C (mitosis/meiosis)	Cell pole/equator	Somatic/germ cells																
Interkinesis	DNA helicase/polymerase/ligase	Crossing over																
Spindle fibers		Tetrads																

*Number indicates which RST.9-10 standard is addressed.

CONTENT STANDARDS: The following performance objectives from S1 C3 PO5, S2 C1 PO1-4, S2 C2 PO1-4, S3 C2 PO2-3 must be taught by end of academic year but are intended to be embedded throughout the academic year, therefore, have not been designated to be introduced in any particular semester. The intent of assigning the other Strand 1 and 3 performance objectives to a semester is based on science content; however, this does not mean the selected performance objectives relate only to that semester.

READING FOR SCIENCE AND TECHNICAL SUBJECTS STANDARDS, GRADES 9-10 (RST.9-10): The following RST.9-10.2, 4, 5 and 10 must be taught by end of academic year but are intended to be embedded throughout the academic year, therefore, have not been designated to be introduced in any particular semester. The intent of assigning the other RSTs to a semester is based on science content; however, this does not mean the selected standards relate only to that semester.

WRITING FOR SCIENCE AND TECHNICAL SUBJECTS STANDARDS, GRADES 9-10 (WST.9-10): The following WST.9-10. 4, 5, 6 and 10 must be taught by end of academic year but are intended to be embedded throughout the academic year, therefore, have not been designated to be introduced in any particular semester. The intent of assigning the other WSTs to a semester is based on science content; however, this does not mean the selected standards relate only to that semester.

***RST.9-10.10 and WST.9-10.10 should be addressed when creating a cumulative performance assessment with each unit, end of semester and/or academic year.**

*Number indicates which RST.9-10 standard is addressed.

CHANGE OVER TIME		Semester 2	
Content: Genetics			
Topic: Molecular Basis of Heredity			
Essential Question(s): Why don't you look exactly like your parents? How are traits passed to the next generation? How do DNA and RNA control the structure and function of cells and of entire organisms?			
Objectives	Standards	ELA standards	
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*
Students will be able to: - Explain how DNA and RNA including the processes of replication and protein synthesis are the basis of heredity and result in genetic diversity.	S4, C2, - PO 2. Describe the molecular basis of heredity, in viruses and living things, including DNA replication and protein synthesis. - PO 3. Explain how genotypic variation occurs and results in phenotypic diversity.	9. Student will research different sources of information to assess whether a virus is living or not and form an opinion that is supported by research evidence. 9. Read articles about patenting genes and form an opinion whether it serves or hinders the research community supported by evidence from articles. 7. Using teacher or student generated Punnett squares students will be able to describe genotypic and phenotypic ratios. Using Punnett square information students will perform f2 generation crosses and explain how the results can affect genetic variation.	7 & 8. Conduct research about a genetic condition. 7 & 8 Conduct research about the effects of limited genetic variation on population. (cheetah and Nene (Hawaiian geese))
Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:			
Heterozygous Allele Dominate/recessive P ₁ , F ₁ Heredity	Homozygous Variation Mendel's laws Autosomal	Geno/Phenotype Mutation Non-Mendelian genetics Gametic	Punnett Squares A-T G-C Genes Mapping/ karyotypes/ pedigrees/cytological

*Number indicates which RST.9-10 standard is addressed.

CHANGE OVER TIME		Semester 2																									
Content: Evolution																											
Topic: Mechanisms																											
Essential Question(s): How has the earth changed? Why are there so many different types of organisms on the planet?																											
Objectives	Standards	ELA standards																									
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*																								
<p>Students will be able to:</p> <ul style="list-style-type: none"> - explain how favorable environmental conditions mutation and recombination of genes, genetic variability, finite supply of resources required for life and differential fitness rates can lead to speciation 	<p>S4, C4</p> <ul style="list-style-type: none"> - PO1: Identify the components that can lead to speciation <ul style="list-style-type: none"> o Genetic variation o Finite resources o Environmental selection - PO 2: Explain how genotypic and phenotypic variation can result in adaptations - PO 3: Describe how the continuing operation of natural selection underlies a population's ability to adapt to changes - PO4: Predict how a change in an environmental factor can affect the number and diversity of species in an ecosyste 	<p>8 & 9 - Present student with opposing theories of mechanisms of evolution and have them discuss whether the author's conclusions are valid.</p>	<p>2 - produce a time line of biological and geological events that leads to the development of the theory of evolution. 2 - Using multiple sources explain how the mechanisms of evolution can lead to speciation.</p>																								
<p>Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:</p> <table border="0" style="width: 100%;"> <tr> <td>Natural selection</td> <td>Fitness</td> <td>Gene flow/immigration/emigration</td> <td>Genetic drift</td> </tr> <tr> <td>Mutations</td> <td>Artificial selection</td> <td>Variation</td> <td>Adaptation</td> </tr> <tr> <td>Differential reproduction</td> <td>Sex/ sexual selection/sexual dimorphism</td> <td>Crossing-over</td> <td>Polymorphism</td> </tr> <tr> <td>Bottle neck</td> <td>Founder effect</td> <td>Speciation</td> <td>Allopatric</td> </tr> <tr> <td>Sympatric</td> <td>Parapatric</td> <td>Adaptive radiation</td> <td>Allele frequency</td> </tr> <tr> <td>Hardy-Weinberg</td> <td>Geno/phenotype</td> <td>Biodiversity</td> <td></td> </tr> </table>				Natural selection	Fitness	Gene flow/immigration/emigration	Genetic drift	Mutations	Artificial selection	Variation	Adaptation	Differential reproduction	Sex/ sexual selection/sexual dimorphism	Crossing-over	Polymorphism	Bottle neck	Founder effect	Speciation	Allopatric	Sympatric	Parapatric	Adaptive radiation	Allele frequency	Hardy-Weinberg	Geno/phenotype	Biodiversity

*Number indicates which RST.9-10 standard is addressed.

CHANGE OVER TIME			Semester 2
Content: Evolution			
Topic: Evidence			
Essential Question(s): Why do living things change over time?			
Content objectives	Standards	ELA standards	
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*
Students will be able to: <ul style="list-style-type: none"> - Explain how scientific evidence from various science disciplines supports the theory of evolution. - Explain relatedness of organisms. 	S4, C4, <ul style="list-style-type: none"> - PO 5. Analyze how patterns in the fossil record, nuclear chemistry, geology, molecular biology, and geographical distribution give support to the theory of organic evolution through natural selection over billions of years and the resulting present day biodiversity. - PO 6. Analyze, using a biological classification system (i.e., cladistics, phylogeny, morphology, DNA analysis), the degree of relatedness among various species. 	9 - Analyze if different sources of scientific evidence supports the theory of evolution. 7 - Using information presented in a text has students construct a cladogram. Present students with a phylogenic tree or DNA information and have them analyze the relationship among organisms.	9 & 10 - Using various reference sources explain how the fossil record, molecular biology, etc. support the theory of evolution. 9& 10 - Using various reference sources analyze, evaluate and explain the relatedness between organisms.
Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:			
Homologous/ analogous Fossil record Phylogeny	Vestigial Radiometric dating Cladistics	Bio-molecular Bio-geographical Artificial selection	Embryology Hardy –Weinberg

*Number indicates which RST.9-10 standard is addressed.

CHANGE OVER TIME			Semester: 2																
Content: Ecology																			
Topic: Energy Flow																			
Essential Question(s): 1. How would an ecosystem be affected if a level of organisms was removed? 2. How do nutrients cycle through the environment?																			
Content Objective(s)	Standards	ELA Standards																	
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*																
<p>Students will be able to:</p> <ul style="list-style-type: none"> - Diagram and create models of the water cycle, carbon cycle, and nitrogen cycle. - Construct a food chain to represent energy transfer through an ecosystem. - Construct a food web that shows the interdependence of organisms within an ecosystem. 	<p>S1, C3,</p> <ul style="list-style-type: none"> - PO 5. Design models (conceptual or physical) of the following to represent "real world" scenarios: <ul style="list-style-type: none"> o carbon cycle o water cycle o nitrogen <p>S4, C5,</p> <ul style="list-style-type: none"> - PO 3. Diagram the following biogeochemical cycles in an ecosystem: <ul style="list-style-type: none"> o water o carbon o nitrogen - PO 4. Diagram the energy flow in an ecosystem through a food chain. 	<p>5 - Provide a diagram of a food chain and have students describe and calculate the amount of energy that is transferred between trophic levels.</p> <p>7 - Provide diagrams of nutrient cycles and have students summarize/explain the steps involved in each cycle.</p>	<p>4 – Have students write an explanation of each step of the nutrient cycles.</p>																
<p>Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 25%;">Types of pyramids</td> <td style="width: 25%;">Food web</td> <td style="width: 25%;">Heterotroph/Autotroph</td> <td style="width: 25%;">Producer/Consumer (types of)</td> </tr> <tr> <td>Biotic/abiotic</td> <td>Types of relationships (symbiotic/predation)</td> <td>Levels of organization</td> <td>Biogeochemical cycles (N, C, H₂O)</td> </tr> <tr> <td>Ecology</td> <td>Ecosystem</td> <td>Interdependence</td> <td>Niche</td> </tr> <tr> <td>Habitat</td> <td></td> <td></td> <td></td> </tr> </table>				Types of pyramids	Food web	Heterotroph/Autotroph	Producer/Consumer (types of)	Biotic/abiotic	Types of relationships (symbiotic/predation)	Levels of organization	Biogeochemical cycles (N, C, H ₂ O)	Ecology	Ecosystem	Interdependence	Niche	Habitat			
Types of pyramids	Food web	Heterotroph/Autotroph	Producer/Consumer (types of)

Ecology	Ecosystem	Interdependence	Niche																
Habitat																			

*Number indicates which RST.9-10 standard is addressed.

CHANGE OVER TIME			Semester: 2
Content: Ecology			
Topic: Populations			
Essential Question(s): 1. How do environmental factors affect human populations? 2. How do organisms interact with one another in an ecosystem?			
Content Objective(s)	Standards	ELA Standards	
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*
Students will be able to: <ul style="list-style-type: none"> - Distinguish between biotic and abiotic factors and predict their impact on human populations. - Describe the relationship between levels of organization within an ecosystem. 	S3, C3, <ul style="list-style-type: none"> - PO 1. Analyze social factors that limit the growth of a human population, including: <ul style="list-style-type: none"> o affluence o education o access to health care o cultural influences - PO 2. Describe biotic (living) and abiotic (nonliving) factors that affect human populations. - PO 3. Predict the effect of a change in a specific factor on a human population. S4, C3, <ul style="list-style-type: none"> - PO 1. Identify the relationships among organisms within populations, communities, ecosystems, and biomes. - PO 2. Describe how organisms are influenced by a particular combination of biotic (living) and abiotic (nonliving) factors in an environment. - PO 3. Assess how the size and the rate of growth of a population are determined by birth rate, death rate, immigration, emigration, and carrying capacity of the environment. 	5 - Have students read scientific publications and identify/analyze relationships and interactions between organisms. 7 – Provide a population growth graph and have students describe factors that affect population levels.	2 - Have students construct a working ecosystem, introduce environmental factors, and observe changes in the ecosystem. Write a formal lab report. 7 - Have students research an environmental factor and predict the impact on human populations.
Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:			
Carrying capacity	Growth rate (exponential/logistic)	Immigration/emigration	Birth/death rate
Population density	Population dispersion	Dependent	Limiting factors (density /independent)
Competition (inter/intraspecific)			

*Number indicates which RST.9-10 standard is addressed.

CHANGE OVER TIME		Semester: 2	
Content: Ecology			
Topic: Environmental Science			
Essential Question(s): 1. How do we know if an ecosystem is “stable” or “healthy”? 2. What are some ways that you can conserve resources?			
Content Objective(s)	Standards	ELA Standards	
		Suggested Instructional Strategies/ Student Activities/ Lessons with RST.9-10. Incorporated*	Suggested Instructional Strategies/ Student Activities/ Lessons with WST.9-10. Incorporated*
<p>Students will be able to:</p> <ul style="list-style-type: none"> - Describe how human activities affect the environment. - Describe how natural disasters affect the environment. - Suggest methods for managing resources. 	<p>S3, C1,</p> <ul style="list-style-type: none"> - PO 1. Evaluate how the processes of natural ecosystems affect, and are affected by, humans - PO 2. Describe the environmental effects of natural and/or human-caused hazards: (e.g., flooding, drought, earthquakes, fires, pollution, extreme weather) - PO 3. Assess how human activities (e.g., clear cutting, water management, tree thinning) can affect the potential for hazards. - PO 4. Evaluate factors that affect the quality of the environment: (e.g., urban development, smoke, volcanic dust) - PO 5. Evaluate the effectiveness of conservation practices and preservation techniques on environmental quality and biodiversity. <p>S3, C2,</p> <ul style="list-style-type: none"> - PO 1. Analyze the costs, benefits, and risks of various ways of dealing with the following needs or problems: (i.e., various forms of alternative energy, storage of nuclear waste, abandoned mines, greenhouse gases, hazardous wastes) - PO 2. Recognize the importance of basing arguments on a thorough understanding of the core concepts and principles of science and technology. 	<p>6 - Have students read and analyze articles about recent natural disasters and/or human-caused hazards.</p> <p>8 – Have students read and evaluate conservation plans from government or private organizations.</p> <p>9 – Provide articles with differing viewpoints on environmental issues and have students compare and contrast.</p>	<p>1 – Have students research and form a debate regarding the cause and effect of natural and human-caused disasters.</p> <p>- Have students research and form a debate regarding the effectiveness of conservation techniques.</p>

	<ul style="list-style-type: none"> - PO 3. Support a position on a science or technology issue. - PO 4. Analyze the use of renewable and nonrenewable resources in Arizona: (i.e., water, land, soil, mineral, air) - PO 5. Evaluate methods used to manage natural resources (e.g., reintroduction of wildlife, fire ecology). 		
--	--	--	--

Vocabulary (RST.9-10.4 and RST.9-10.5) to be addressed during instruction:

Conservation practices	Renewable/nonrenewable resources	Biodegradable/nonbiodegradable	Pollution
Enhanced greenhouse effect	Greenhouse gases	Acid rain	Invasive species
Alternative energy	Extinction	Deforestation/clear cutting/desertificati	
Interdependence	Sustainability	Legislation	

*Number indicates which RST.9-10 standard is addressed.
