

DNA, Genes, and Chromosomes

Four friends were talking about human DNA, genes, and chromosomes. They each had different ideas about where these structures were found. This is what they said.

Bella: "I think DNA is found on genes."

Kyra: "I think chromosomes are found on genes."

Kurt: "I think genes are found on DNA."

Joan: "I think chromosomes are found on DNA."

Whom do you agree with the most? _____ Explain why you agree.
