Forces- Questions

1. Can you have a force without some object (someone or something) exerting the force and some other object receiving the force?
2. Is it possible for one object to exert a force on another without ever touching it? If so, name an example.
3. How would you define or describe a force? Include all the things you have discovered about forces.
4. Do receivers of force usually have more than one force acting on them at the same time? Give an example for your answer.
